ZIP SYSTEM® SHEATHING AND TAPE
FORTIFY YOUR ROOF AGAINST THE STORM

When it comes to building in storm-prone areas, you not only build for comfort, but for protection. A high-performance roof deck can be your home’s first line of defense against high winds and wind-driven rain. With a built-in water-resistant barrier (WRB) and taped panel seams, ZIP System® sheathing and tape help you protect your roof with a sealed roof deck that eliminates the need for felt. It not only helps reduce installation steps on the job, but strengthens one of the most vulnerable areas of the home. Plus, ZIP System sheathing and tape helps meet resilient building standards by FORTIFIED™ Home™ and other storm-protection standards, which can possibly help homeowners who are eligible for insurance incentives. Find your local representative at ZIPSystem.com/ContactUs to learn how to get ZIP System sheathing and tape on your next build.

“FORTIFIED Home” is a program of the Insurance Institute for Business & Home Safety (IBHS). Not all homes built using ZIP System® sheathing and ZIP System™ tape will qualify for a FORTIFIED Home designation. Homes require compliance with all FORTIFIED Home™ technical requirements and inspections. Visit FortifiedHome.org for details.
THE FASTEST WAY TO A RESILIENT ROOF

To protect against extensive water intrusion in a high-wind event, choose the all-in-one sealed roof deck solution with a unique combination of structural durability, built-in moisture resistance and strength you need for a durable roof system base. That’s exactly what you get with ZIP System® sheathing and tape.

PROTECTION AGAINST WATER INTRUSION
The combination of a built-in water-resistive barrier and taped panel seams on a high-strength engineered wood panel, eliminates the need for felt and protects if high-winds blow off roof coverings.

STRUCTURAL DURABILITY FOR HIGH-WIND ZONES
The Structural 1-rated engineered wood panel provides strength and stiffness for a dependable roof deck.¹

INSTALLS FAST, ELIMINATING RE-WORK
Save installation time by eliminating the need for felt. With a built-in water-resistive barrier there’s no risk of water getting behind your protective outer layer and damaging sheathing panels, which can cause costly delays for re-work.

QUICKER ROUGH DRY-IN
With ZIP System sheathing and tape, you can reduce the amount of steps to create a sealed roof deck to help achieve quicker dry-in status.

ENGINEERED FOR A VARIETY OF ROOFING MATERIALS
Three panel thicknesses let you choose the strength and protection you need for your build.

Asphalt Shingles  
Metal Shingles & Panels  
Clay & Concrete Tile

Go to our technical library for specifications and performance details for 7/16”, 1/2”, or 5/8” panel options.

¹ Sheathing panels stamped with Structural 1 panel grade are required to meet or exceed racking shear and cross-panel strength and stiffness listed within the Voluntary Product Standard (PS2-10) for Wood-Based Structural-Use Panels.

All ZIP System® products are backed by a 30-year Limited Warranty.

*Todds Piper, Coastal Builder

“The idea behind using ZIP System sheathing and tape on a roof is that during high winds, even with the loss of shingles, the house is built storm tight with added protection against water penetration.”

TODD PIPER, COASTAL BUILDER
