

**Introducing AdvanTech™ Subfloor Adhesive—
a part of the Squeak-Free AdvanTech™ Subfloor Assembly**

AdvanTech™ subfloor adhesive is a foam-to-gel polyurethane adhesive so strong it even adheres to wet and frozen lumber. When paired with well-known AdvanTech® subfloor panels, it creates a squeak-free AdvanTech™ subfloor assembly backed by a Squeak-Free Guarantee™¹ at the panel-to-joist connection.

Manufactured by Huber Engineered Woods LLC, the squeak-free AdvanTech subfloor assembly combines the strength, stiffness and moisture resistance of AdvanTech® subfloor panels with the polyurethane bonding power of AdvanTech™ subfloor adhesive.

Product benefits of AdvanTech subfloor adhesive include:

- A moisture-curing bond ideal for dry, frozen or wet lumber.
- Bonding power so strong it eliminates movement between the panel and joist, keeping floors quiet and preventing nail pops.
- A quick and easy gun-applied foam-to-gel adhesive that increases installation flexibility and provides a 20-minute open time.
- A heavy-duty polyurethane bond that helps reduce squeaks at the panel-to-joist connection and fills minor gaps on irregular surfaces for even finished floors.
- Powerfully strong fastener holding helps prevent nail pops.
- Initially available in New England (ME, NH, VT, MA, CT, RI) and New York. Sign up at AdvanTechSFA.com to be contacted when AdvanTech subfloor adhesive is available in your area.
