Overview

This handbook is intended to provide general information regarding assemblies that have been evaluated for fire-resistance and/or for acoustical attenuation performance. The assemblies presented in this handbook feature EXACOR® panels installed as part of an assembly of materials and tested and evaluated in accordance with the following standards:

**Fire-Resistance Testing**

**Sound Assembly Testing**
- ASTM E413 Classification for Rating Sound Insulation
- ASTM E989 Classification for Determination of Impact Insulation Class
- ASTM E3222 Standard Classification for Determination of High-Frequency Impact Sound Ratings

The information contained in this handbook is for guidance and reference only. Please refer to the applicable fire-resistance rated assembly published by Underwriter’s Laboratory (UL) or ICC-ES for full assembly details, requirements, and options. Some fire-resistance rated assemblies contain multiple material and installation options that may have an impact on sound performance. Not all the available options in each fire-resistance rated design listing have been tested for STC/IIC ratings. Please see ICC-ES ESL-1365 for more detailed information regarding assemblies tested to ASTM E90 and E492.

Please note that this handbook may also include sound assemblies that have NOT been evaluated for fire-resistance. The level of fire-resistance (if any) for each assembly is presented at the top of the page for each assembly configuration. Follow all local building code requirements for fire-resistance and sound transmission.

Each assembly presents information for the assembly without a floor covering. This information is meant to represent the base level of performance for the given assembly. EXACOR® panels should always be covered by an appropriate finished floor covering. Please see the EXACOR® Sheathing Installation Manual and EXACOR® Underlayment Installation Manual available at www.exacor.com for more information.

Floor/Ceiling Assemblies
Fire-Resistance & Sound Ratings

This section contains STC and IIC ratings for floor/ceiling assemblies that are based on designs that have been assessed for fire-resistance in accordance with ASTM E119/ANSI UL 263. See specific fire-resistance rated Design Listing from UL for full assembly details and requirements. Follow all local building code requirements for fire-resistance and sound transmission.

EXACOR® UNDERLAYMENT

Wood Truss
UL L528 - System No. 22
UL L546 - System No. 14
1hr Fire-Resistance

Tested Acoustic Assembly Contains:
- 1/2" (12mm) EXACOR® Underlayment
- 23/32 Wood Structural Panel
- 18" Wood Truss, 24" OC (Min. 12" depth for fire-resistance)
- R-13 Glass Fiber Insulation
- Resilient Channel (See Table Below)
- 5/8" Gypsum Panel (See Table Below)

*See applicable UL Design for full assembly details and requirements.

Fire-Resistance Rated Wall Assemblies

Fire-Resistance Ratings
This section contains descriptions of wall assemblies that have been tested in accordance with ASTM E119/ANSI UL 263 for fire-resistance or in accordance with NFPA 285 Standard Fire Test Method for Evaluation of Fire Propagation Characteristics of Exterior Wall Assemblies Containing Combustible Components. Calculations for fire-resistance rated load-bearing walls are based on the 2018 National Design Specification for Wood Construction® (NDS®) design procedures and in accordance with ASTM D6513 Standard Practice for Calculating the Superimposed Load on Wood-Frame Walls for Standard Fire-Endurance Tests. Unless otherwise noted, all superimposed wall loads were calculated assuming walls were braced by sheathing.

Applications and Uses
Code-compliance for EXACOR® sheathing is provided in ICC-ES ESR-4635 as an exterior sheathing material suitable for use in Construction Types III and V as defined by the International Building Code (IBC). Fire-resistance rated wall assemblies evaluated for use with EXACOR® sheathing can be found in ICC-ES ESL-1230. Typical applications include load-bearing exterior walls and use as part of an assembly to meet townhome unit separation requirements under the International Residential Code (IRC).

**Exterior Walls**

EXACOR® panels can be used as an exterior sheathing panel in load-bearing exterior wall assemblies that are required to be fire-resistance rated. Due to its fire-resistive nature, EXACOR® sheathing is well suited for applications in fire-rated exterior walls that are near or adjacent to property lines and therefore require additional fire-resistance. Fire-resistance rated exterior wall assemblies with EXACOR® sheathing feature fire-resistance ratings applied to both sides of the wall to simplify meeting code requirements related to Fire Separation Distance (FSD).

In Construction Type III under the IBC, exterior wall assemblies greater than 40ft in height above grade plane trigger requirements to comply with NFPA 285. Select exterior wall assemblies with EXACOR® sheathing have been evaluated for compliance with NFPA 285. Please refer to ESL-1290, ICC Design No. MOS-1290-05, for NFPA 285 compliant assemblies with EXACOR® sheathing.

EXACOR® sheathing is intended to be used as exterior sheathing and should not be used as a replacement for interior gypsum wall board or other interior finish elements.

**Townhome Unit Separation**

EXACOR® sheathing can be used as part of an assembly to meet the requirements of the IRC for townhome separation by constructing two 1-hour rated walls as detailed in ICC Design No. MOS-1290-04 or by constructing a double wall in accordance with ICC Design No. MOS-1290-07A/B. EXACOR sheathing should be installed to face inward, or toward the non-occupant side of the wall as it should not be used as an interior finish panel. Always follow local code requirements for fire-resistance rated construction and townhouse separation. For more information on the use of EXACOR in townhomes, please see our [Technical Tip Townhome Separation Walls with EXACOR® Sheathing](#).

EXACOR® sheathing is not a direct replacement for gypsum shaft liner products. The use of EXACOR in townhome separation walls is limited to double walls as described in IRC R302.2.1.
### ICC Design No. MOS-1290-03

**Load-Bearing - 90% Design Load**
2hr Fire-Resistance (From Both Sides)
